

Energy research Centre of the Netherlands

Introduction to group discussion Reinforcing international cooperation

ATEsT stakeholder meeting, Brussels, 29 January, 2009

Ingo Bunzeck

Reinforcing international cooperation

- This activity aims at understanding in which fields international cooperation is beneficial to enhance the transition of the energy system.
- Its goal is to support decision making related to how cooperation between the EU and third countries enhance the development of energy technologies and their deployment.

Perspectives from the ATEsT consortium

Reinforcing international cooperation

- Potentials of Joint Implementation (JI) and Clean Development Mechanism
 - Can we make our targets elsewhere outside the EU
- Benefits of international cooperation initiatives like IPHE, CSLF
 - for example by exchanging knowledge on local learning aspects of energy technologies like installation, utilization, etc.
- Development of deployment and costs outside Europe (i.e. integrate IEA projections in SETIS)

Questions for discussion

- What energy technology policy questions are relevant?
- What tools are needed to answer these questions?
- How does the ATEsT framework fit the needs to support decision making on the SET-Plan?
- Which geographical levels (EU, MS, regions) should be addressed by the modelling framework?
- How do the specified tools relate to the possibilities models have to offer, i.e. are there models available to provide answers to specific policy questions?
