

ANNOUNCEMENT:

Thursday 14 December 2017, 14:00-16:00 [CET](#)

European Industrial Energy Efficiency Good Practices Platform

The 3rd Webinar of the EUMERCI project is organized on Thursday 14 December and focuses in the dissemination of methods and tools aiming to increase energy saving in EU industry. Industrial companies, European and National Industry Associations and ESCOs are invited to participate in order to get familiar with the final outcome of the EUMERCI project, the EIEEP platform which aims to facilitate the decision making on choosing efficient energy saving measures.

The valorized results of the 2 year research conducted during the project's implementation are now presented in the final Webinar C, gathered to the EIEEP platform, a comprehensive database of "Good" and "Best" Practices in the field of energy efficiency in the industrial sector, collected throughout Europe. The selection process of the chosen practices and the way to use the platform will be explained. Furthermore, scenarios concerning the energy efficiency in the industry sector, as resulted from the project's deepening on the field are described.

This dissemination activity gathers all the respective tools which are aiming the support the growth of the energy efficiency in the industry processes, according to the targets of the "Energy Efficiency" Directive (2012/27/EU-EED).

Participation to the webinar is free upon registration to the form at the following link:
