

# Planning a biogas plant

## The company

- Private engineering and consulting company
- Leading in the Austrian environmental, energy and infrastructure sector
- Independent of industry and trade
- Integrated in national and international networks
- Independent advice in all areas of business activities
- From project development to financing, planning and construction supervision up to commissioning
- Quality assurance

# ING GERHARD AGRINZ GMBH

**Renewable Energy**

**Consulting Engineers for  
Drainage Engineering and Water Economy**

**Consulting Engineers for Surveying**

**Mechanical Engineering**

**Data Processing & Information Technology**

**Subsidiaries**

**BIOAGROS KFT.**  
MÉRNÖKI IRODA

**Bio Agros KFT.**  
Consultation - Planning - Realisation

## **Project management within the autonomous business segments**

- Environmental engineering and water management
- Waste water management and water supply facilities
- Surveying
- IT Services
- Facility management
- Consulting
- **Renewable Energy**

# RENEWABLE ENERGY

## Use of biomass

- Biogas
- Bioethanol
- Biodiesel
- Pyrolysis
- Wood pellets

- Combination of different technologies
- Other sources of renewable energy

# BIOGAS

## Heat-, electrical power and fuel production

### Biomass from

- Agriculture
- Food industry
- Animal feed industry
- Communal waste (biowaste)
- Gastronomy

### Production of

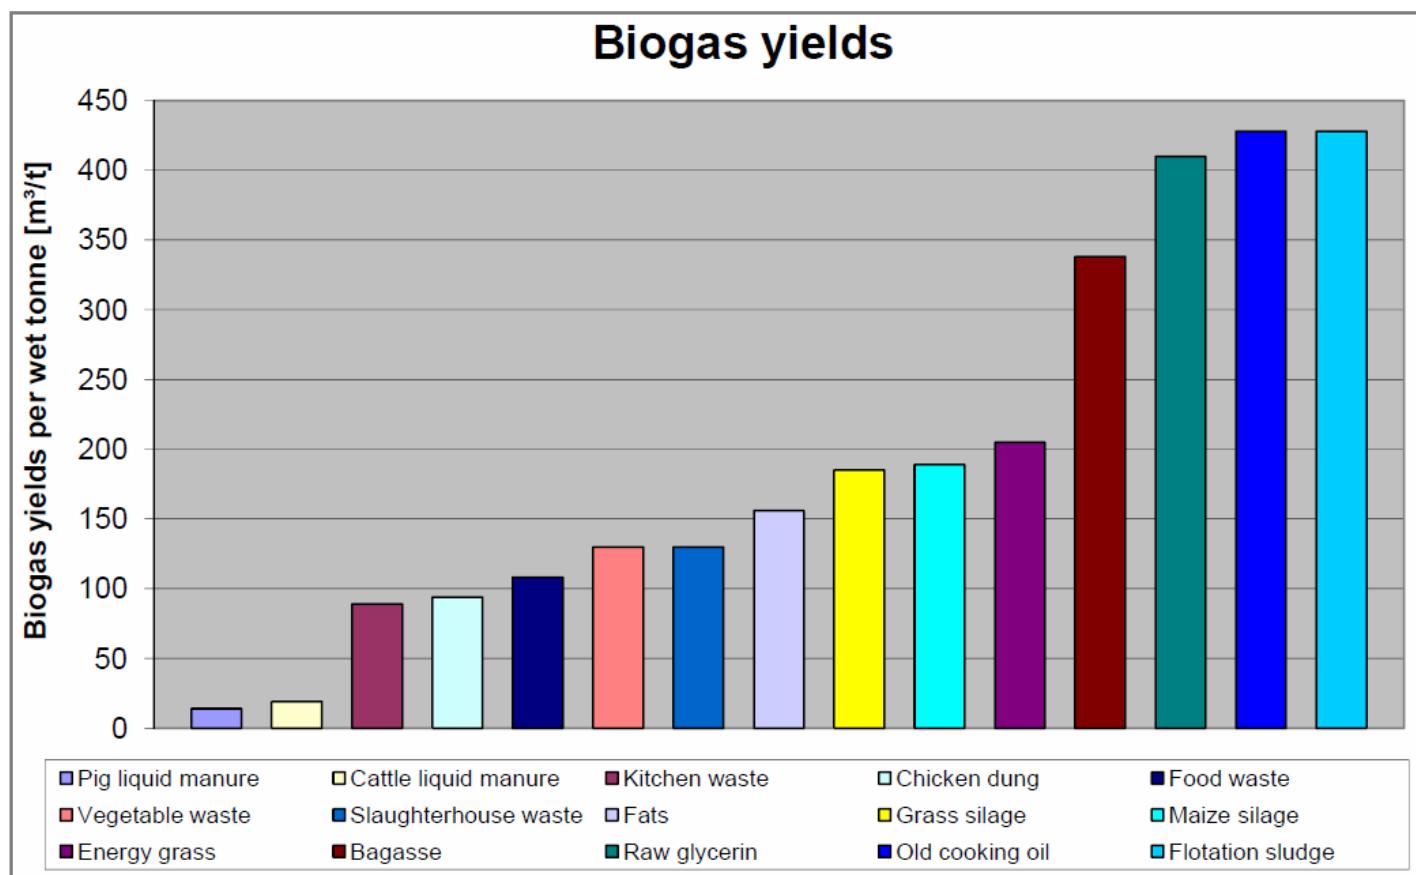

- Electrical power
- Heat
- Fuel
- Fertilizer

# Input material used

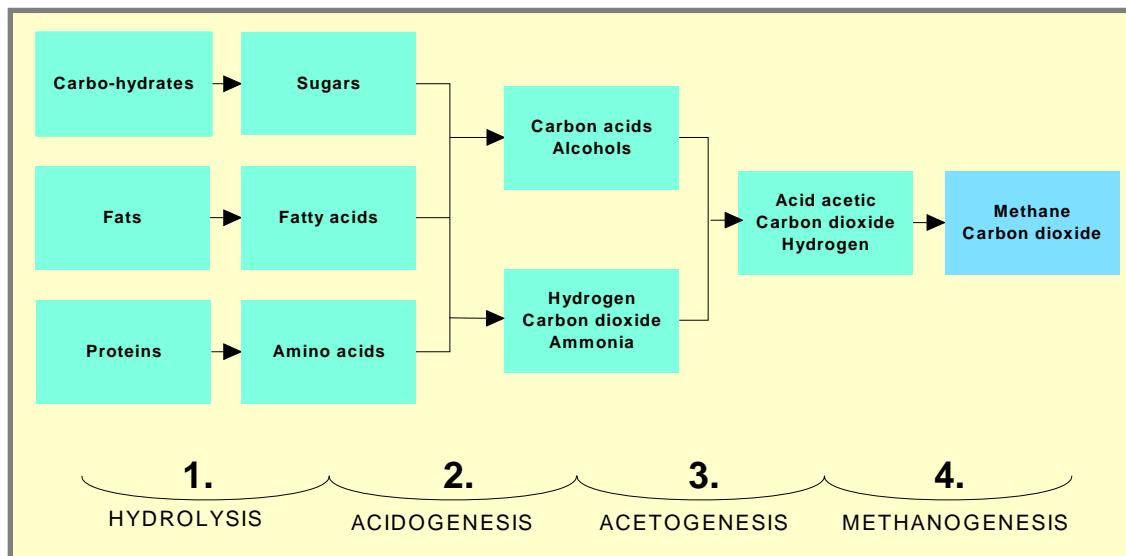

## Input material

Corn silage, grass silage, pig liquid manure, cattle liquid manure, chicken dung, energy grasses, vegetable waste, pomace, food waste, kitchen waste, biowaste, old cooking oil, chip fat, flotation sludge, glycerin, slaughterhouse waste, ....

# Biogas process

- Multi-step fermentation process
- Breakdown of organic substances with high molecular weight into substances of lower molecular weight until it reaches methane
- Damp anaerobic environment

## Stages of fermentation

1. Hydrolysis
2. Formation of acid
3. Formation of acetic acid
4. Formation of methane

# Biogas plants

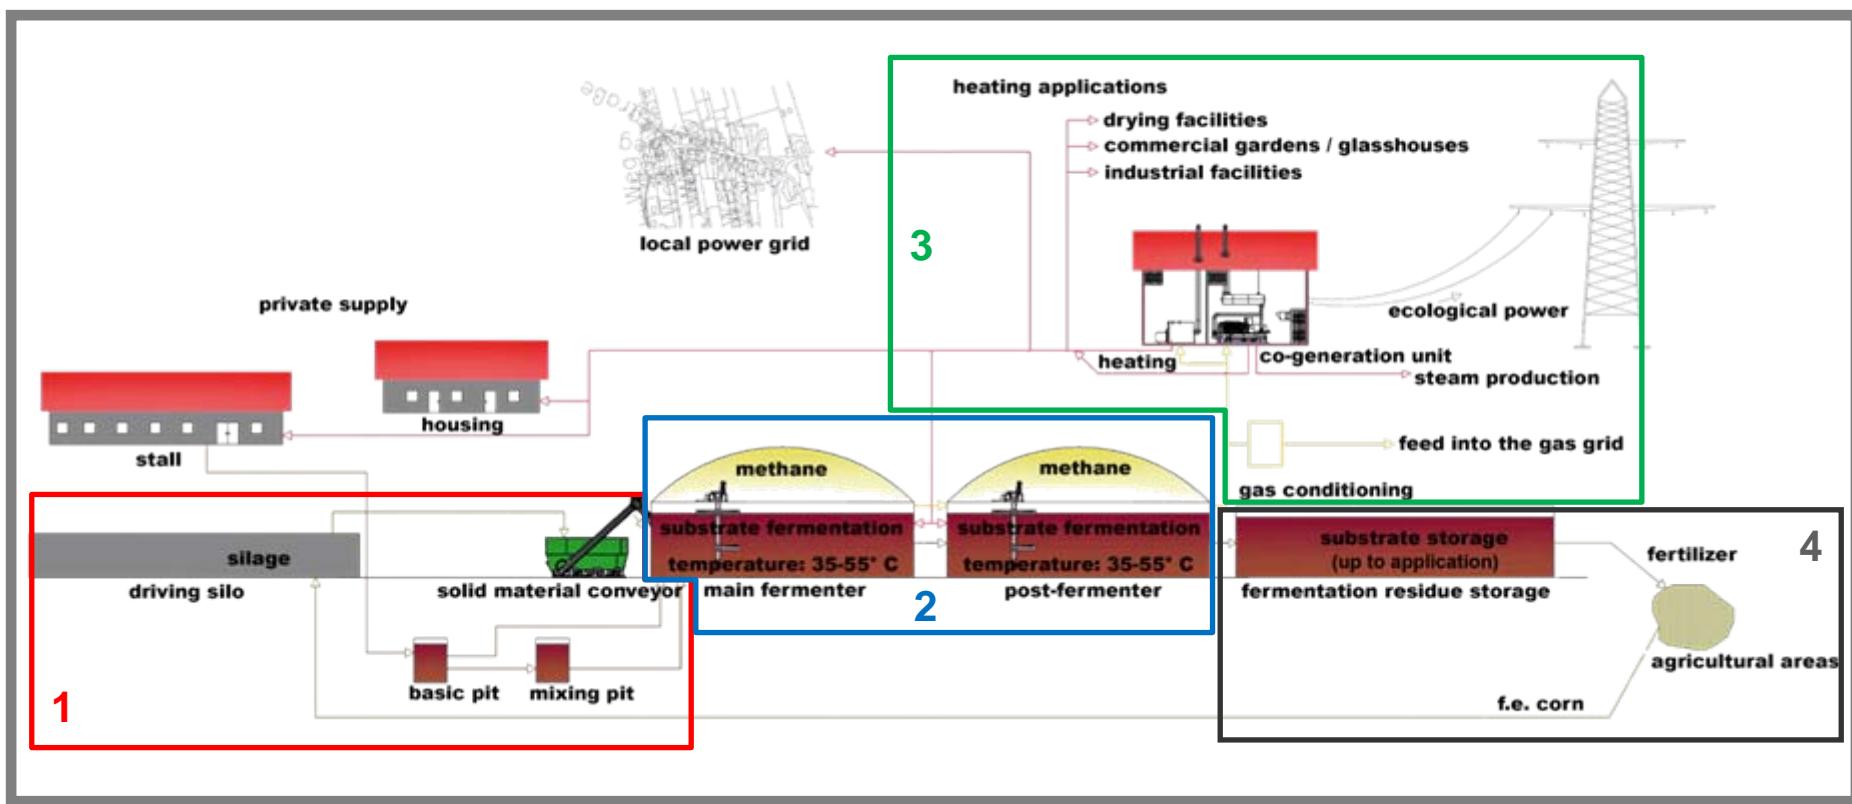

Depending on the input material there are 3 types of biogas plants:

- **Waste biogas plants** (biogenic waste from food industry, gastronomy, slaughterhouses, animal feed industry, biowaste from households, ...)
- **Agricultural biogas plants** (manure and dung from cattle, pig, chicken, ... and agricultural by-products and products)
- **Co-Fermentation biogas plants** (main components are agricultural waste and products combined with biogenic waste)

This 3 types of biogas plants vary in the design, in the equipment and in the operating mode.

# Process flow of a biogas plant

# Agricultural biogas plant (500 kW)

## Biogas plant Margarethen / Moos (Austria)

Substrate used (9.980 t/a):

Corn silage, Sudan grass, liquid manure

Output:

electrical: 500 kW<sub>el</sub>

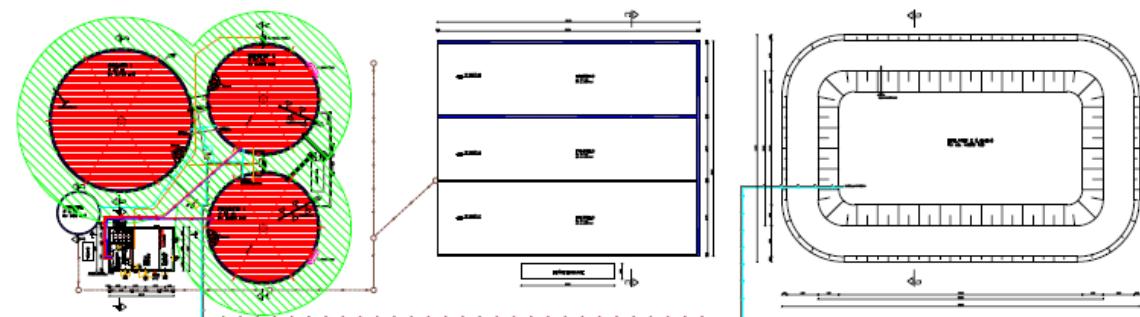

thermal: 535 kW<sub>therm</sub>

Energy yield per year:

Biogas: 1,4 Mil. Nm<sup>3</sup>/year

Electricity: 3,9 Mil. kWh/year

Heat: 4,2 Mil. kWh/year

# Agricultural biogas plant 500 kW

Biogas plant Margarethen / Moos

# Agricultural biogas plant 500 kW

Biogas plant Margarethen / Moos

# Agricultural biogas plant 500 kW

Biogas plant Margarethen / Moos

# Agricultural biogas plant 500 kW

## Biogas plant Margarethen / Moos

# Biogas plants

Biogas plant Japons 500 kW

Biogas plant Lichtenwörth 500 kW

Biogas plant Wallsee 500 kW

- (1) Bunker silo
- (2) Liquid manure pits
- (3) Main fermenter
- (4) Post fermenter
- (5) Fermentation residue storage

# Biogas plants

Biogas plant Gabersdorf 1.000 kW

Biogas plant Orth a. d. Donau 1.000 kW

<sup>1</sup> Possible biomass: grass silage, pig liquid manure, chicken dung, energy grasses, sugar sorghum, food waste, kitchen waste, slaughterhouse waste and so on.

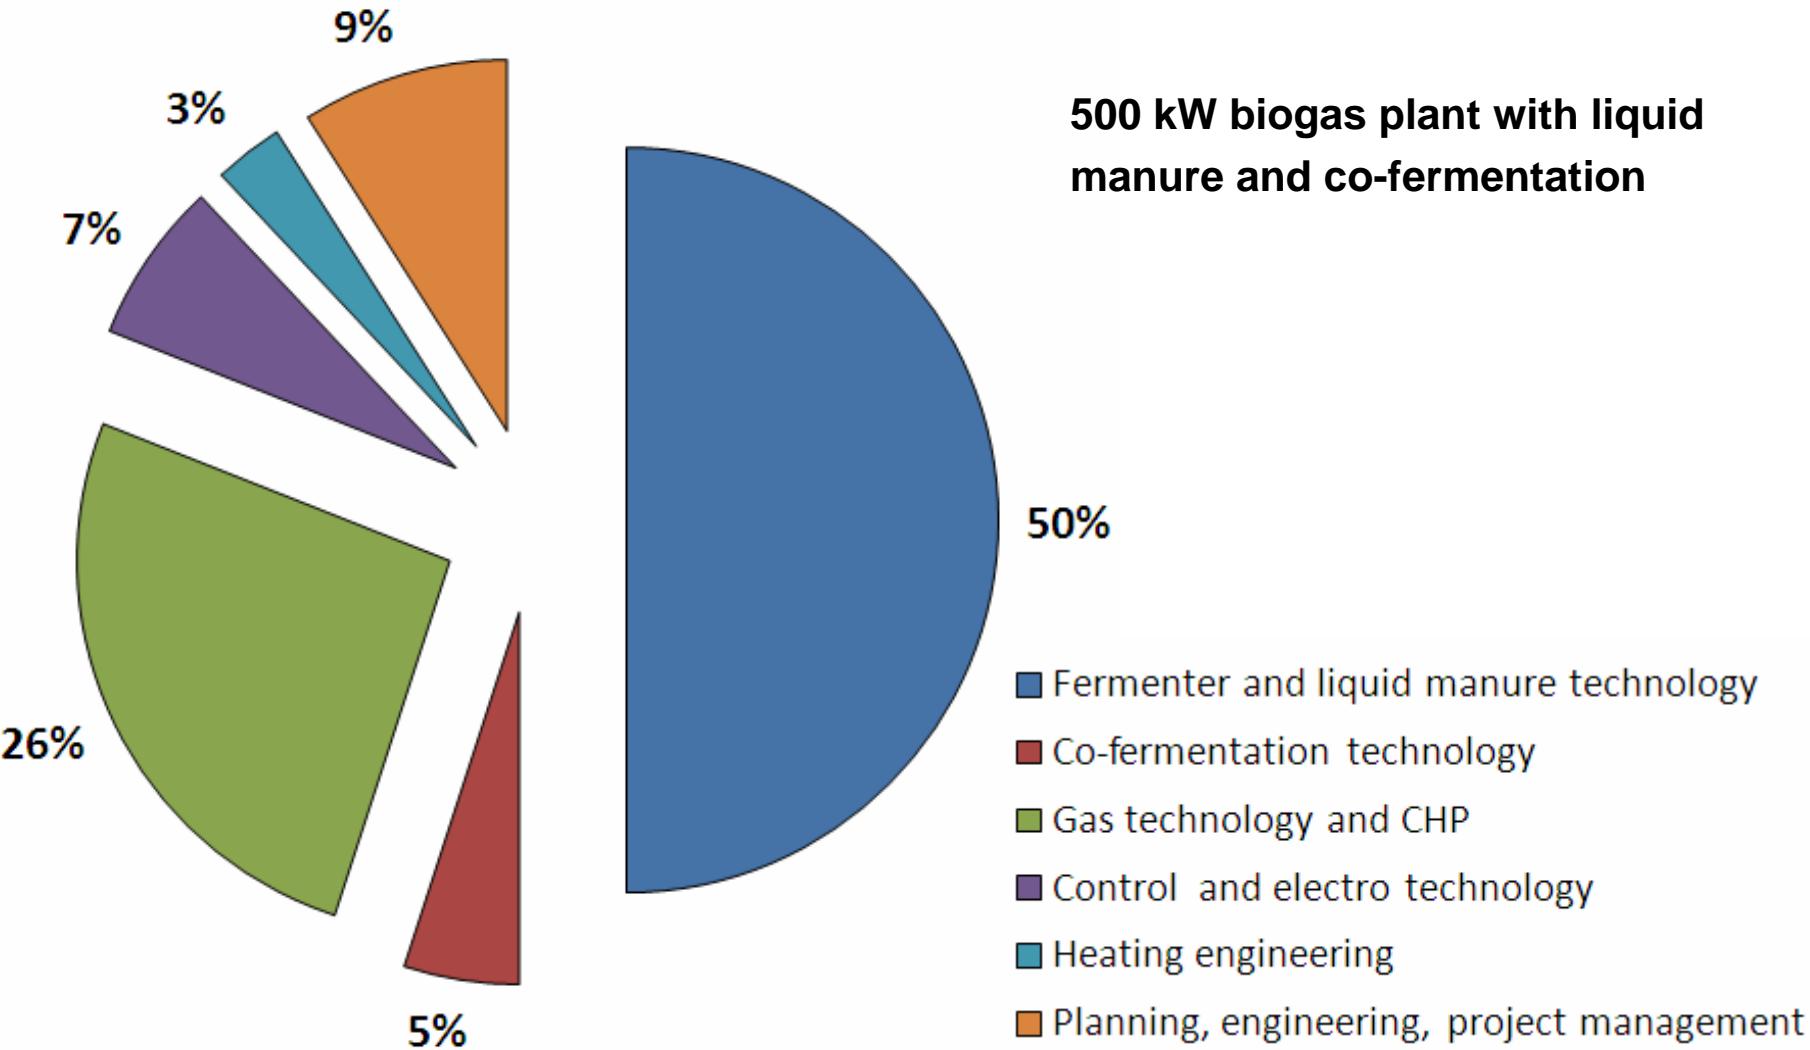

<sup>2</sup> Current feed-in tariff assumed: 0,0730 €/kWh (interconnected system, 0,0846 €/kWh (non-interconnected islands)

<sup>3</sup> Heat sales price assumed: 0,03 €/kWh

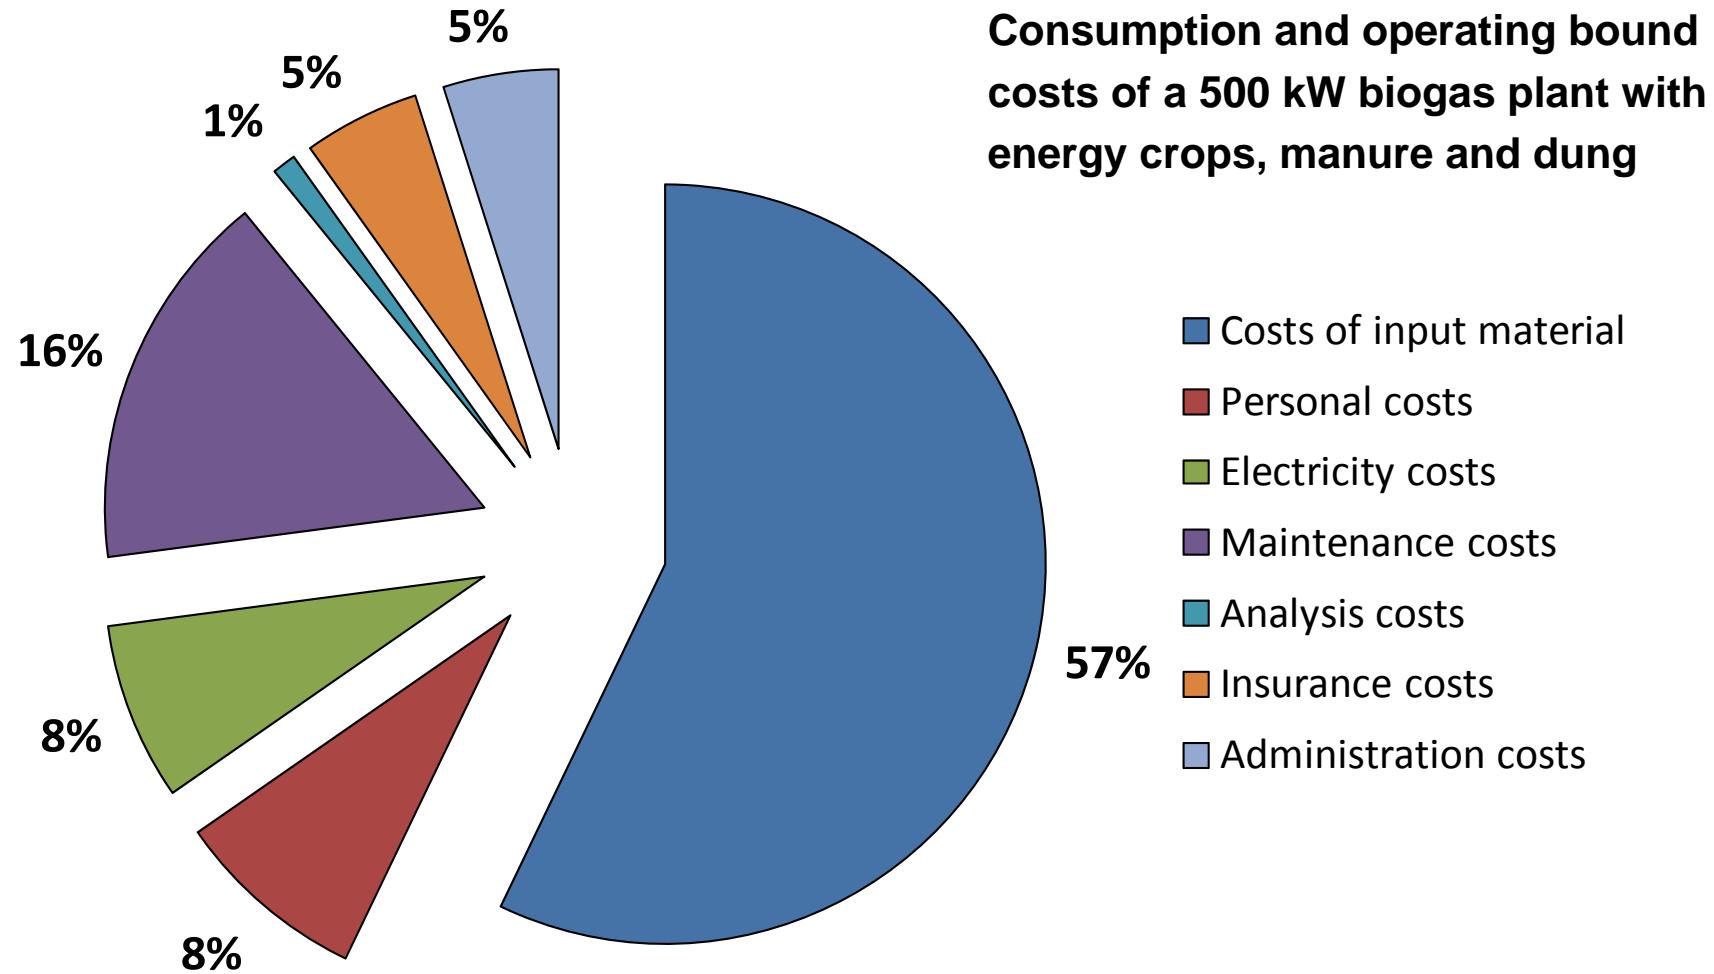

The investment costs depend on the equipment of the biogas plant, utilized biomass, location etc.

On site a connection to the power grid and the possibility for power feed-in is required.

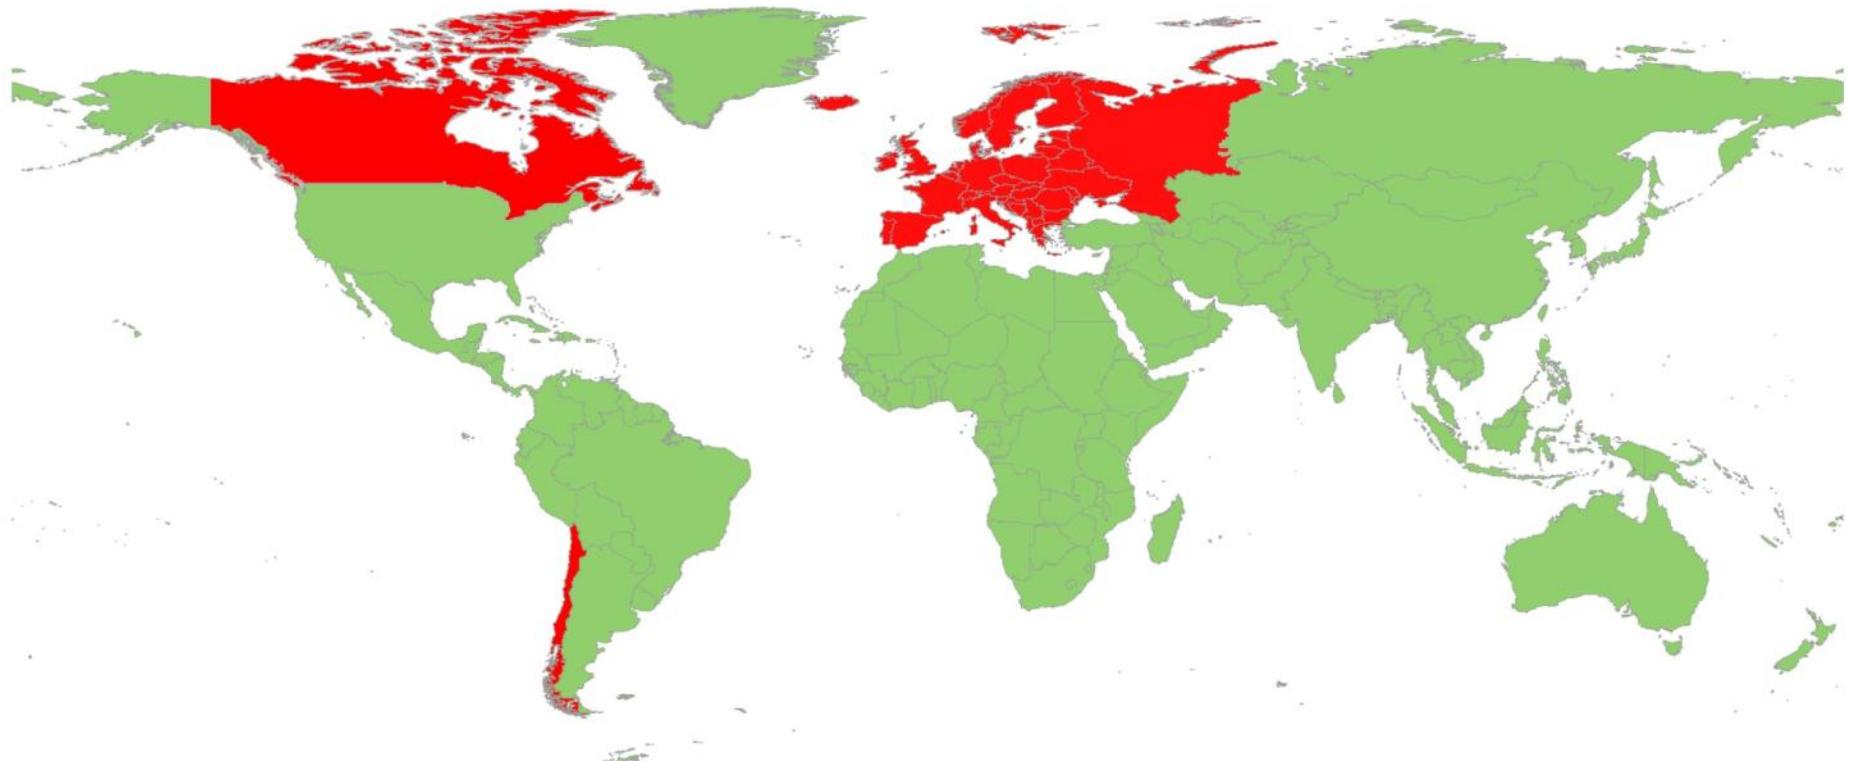

# Split-up of investment costs

# Operating costs
